

Training Workshop

Principles of Technical Management

Success in technical management depends on the ability to establish relationships and deal effectively with other people than on technical skills.

Some small and medium companies have very good experienced supervisors, operators and workers with little or no training or preparation for the new or near future position in technical management.

This training session will help those supervisors, operators or workers who are going to be promoted to a technical management position to think through the problem more clearly and to enable them to arrive at an optimal course of action.

- Duration: One (1) day, eight (8) hours
- Maximum number of participants: 15
- Location: Designated company site

Course Objectives

- Responsibilities and main functions of technical management
- The importance of efficiency and effectiveness of technical management
- Key elements for management success
- Recognize and be prepared to train workers, operators, supervisors and technical staff
- Recognize and be prepared to provide incentives to the workers, operator, supervisors and technical staff
