

CBA Engineering Support Services

CONFINED SPACE PROGRAM

CBA Engineering Support Services offers to clients develop a program to protect employees who must enter confined spaces by providing the necessary recommendations for correct equipment, training and supervision.

The program proposed by CBA Engineering Support Services would include the following key elements:

1. Recognition
2. Identification of Hazards in Confined Spaces
3. Hazard Assessment
4. Development of Code of Practice
5. Training *

* All equipment and materials for training would be provided by client in accordance with needs.

Scope of Work

CBA Engineering Support Services would conduct the following activities

- 1) Familiarization with workplaces and collecting the necessary information such as maintenance, operation and safety procedures, drawings, etc, associated to confined spaces activities
- 2) Do all necessary inspections of the workplaces and identify all confined spaces and work procedures associated to confined spaces that workers may be required to enter for planned or unplanned maintenance or in an emergency.
- 3) The identification of all hazards in the confined spaces
- 4) Hazard Assessment
- 5) Development of Code of Practice

CBA Engineering Support Services

According to Occupational Health and Safety Code of Alberta, the code of practice will include:

- Description of confined space(s) at the work site
- Reasons for work involving entry into confined spaces
- Identification of hazards that may be present in the confined space(s)
- Worker training requirements
- Entry permit system
- Procedures for each type of confined space entry and the work inside the confined space
- Testing the atmosphere
- Ventilation, purging and inerting
- Isolation of hazardous substances and energy
- Emergency response
- Roles and responsibilities of the tending worker
- Recordkeeping requirements

Methodology

- CBA Engineering Support Services would conduct the activities and provide all necessary guide and assistant to the company management team
- The company would prepare the documents, procedures and other types of work associated with the scope of work in accordance with the recommendation of CBA Engineering Support Services. Once each document, procedure or activity is completed and approved by both the company and CBA Engineering Support Services, the documents of service would be signed.
- During the first week of this work, both the assigned member of the company and CBA Engineering Support Services would design a general schedule of activities for each week and the whole program.
- CBA Engineering Support Services and assigned member of the company would prepare a weekly report in order to keep a record of activities has been done, to evaluate the results or submit any type of recommendations.
- CBA Engineering Support Services would assist to assigned member of the company in the preparation of the program.

CBA Engineering Support Services
