

Training Workshop

Occupational Health & Safety Management System

Important amounts of companies are looking for ways to reduce the cost, improve the safety of people, product, and processes.

CBA Engineering Support Services believes that health & safety good management practices are fundamental in business today and should be integrated to different areas within an organization such as Maintenance, Operation, Production, Quality, Environmental, Engineering, Personnel and Finance areas. None of these can be managed in isolation.

The training Session is a comprehensive one-day program concentrating in the necessary tools to develop an efficient management system integrated into the organization and incorporating economic aspects.

The purpose of a Health and Safety Management System is to identify, assess and control workplace hazards.

- Duration: One (1) day, eight (8) hours
- Maximum number of participants: 15
- Location: Company designated site

Objectives

- To understand the definitions, and the main concepts of the Occupational Health and Safety Management System (Including **COR and IRP**)
- To understand the Health & Safety legislation of the Province of Alberta related to the OHS Management System
- To interpret the Canadian Standard Association, CSA Z1000-06
- To have a good understanding of how an OH&S management system can be integrated into the organization of a small or medium company.
- To understand the process and implementation stages
- To understand the required documentation and records.
